

Results

QuestionControllerEndpoints:

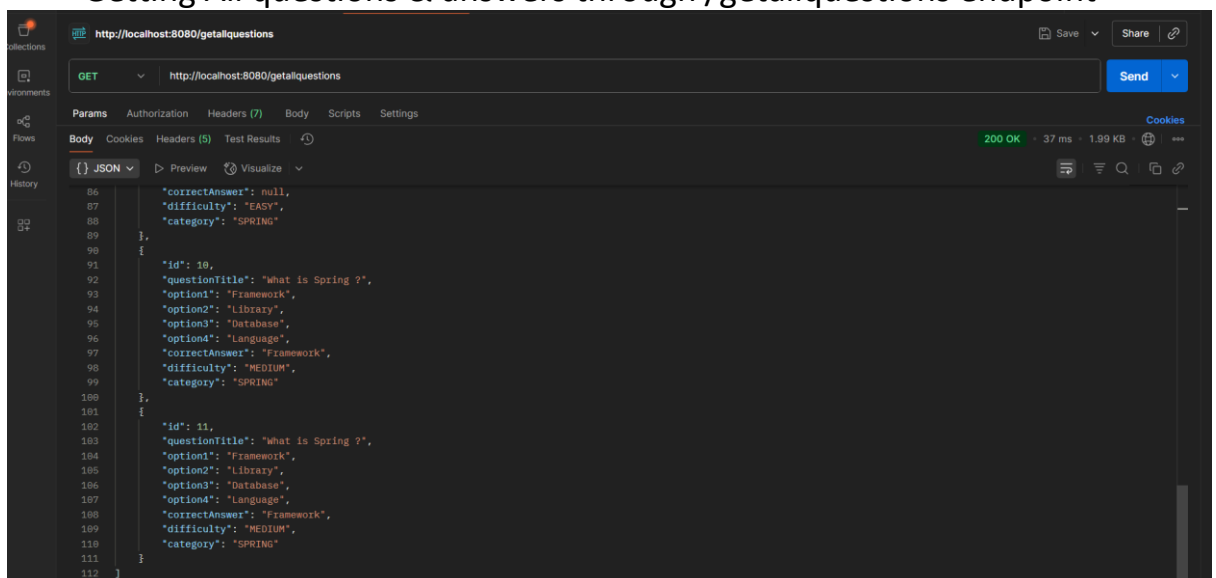

1) /addquestions:

Adding questions through /addquestions endpoint

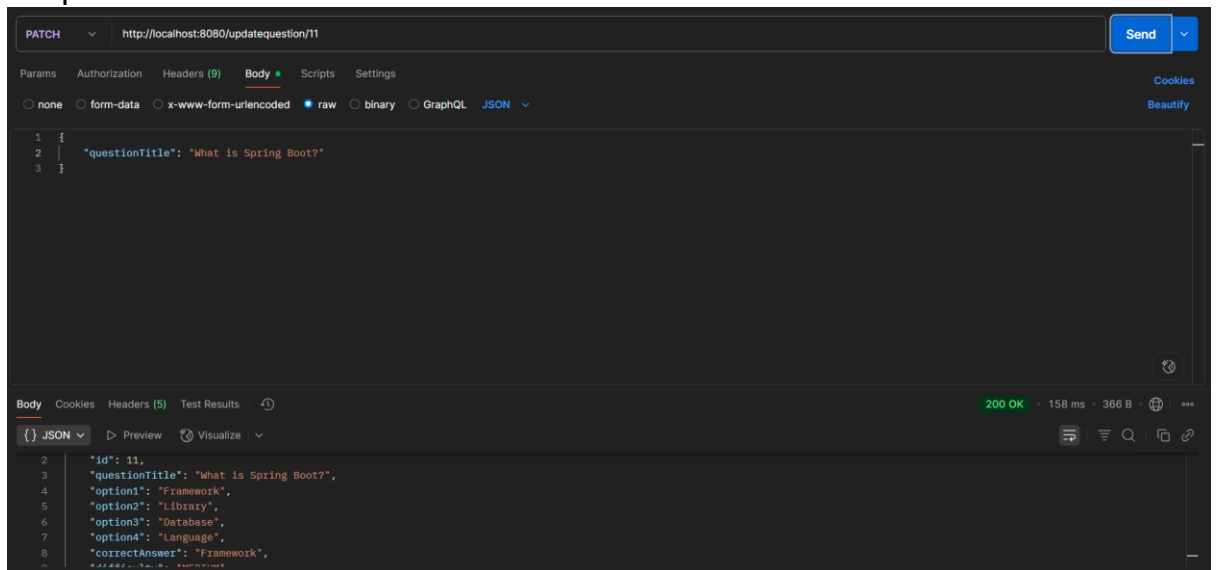

2) /getallquestions

Getting All questions & answers through /getallquestions endpoint

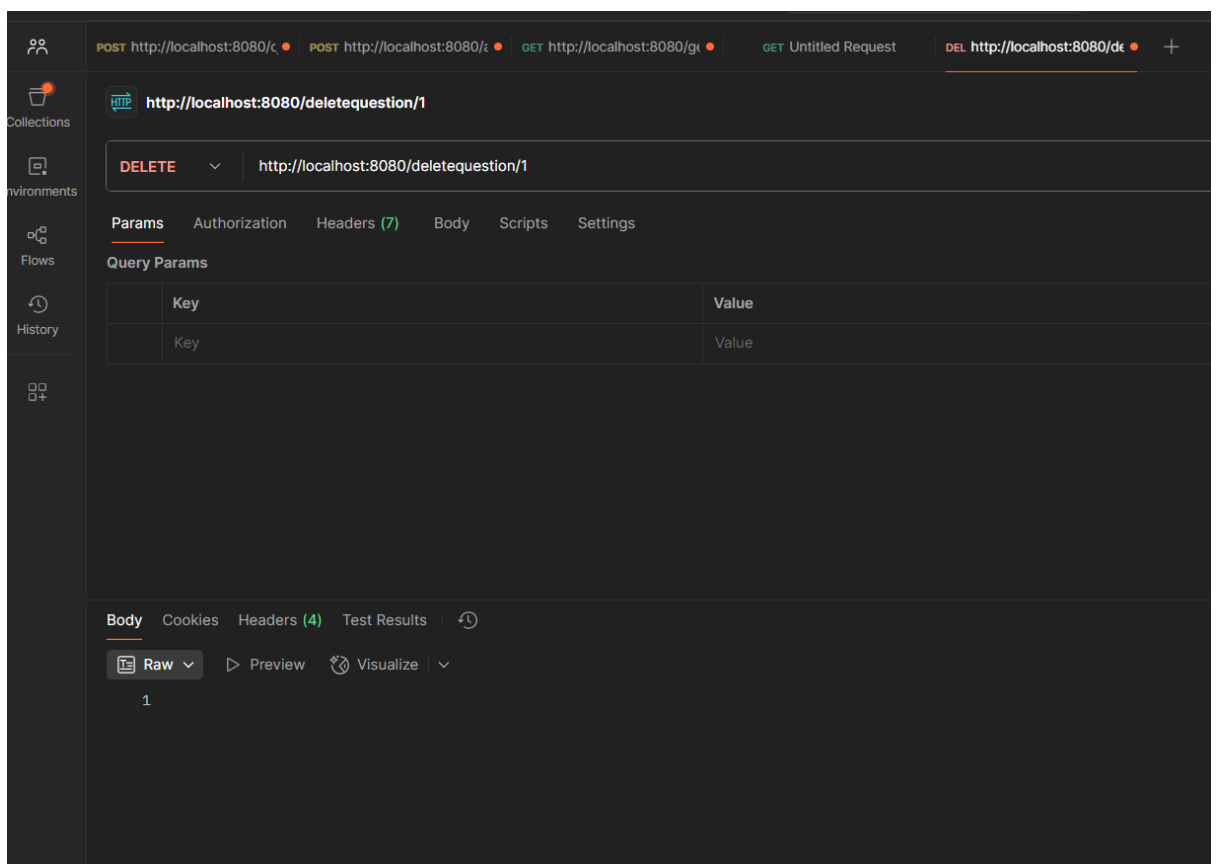

3) /updatequestion/{id}

Patch Updating the question through /updatequestion/id endpoint

4) /deletequestion/{id}

Deleting question through /deletequestion/id endpoint

QuizControllerEndpoints:

1) /quiz/create

Creating quiz through /quiz/create end point

The screenshot shows a REST client interface with a POST request to `http://localhost:8080/quiz/create?category=SPRING&level=MEDIUM&title=JavaBasics`. The request is successful, returning a 200 OK status. The response body is a JSON object representing a quiz.

| Key | Value | Description |
|-------------------------------------|----------|-------------|
| <input checked="" type="checkbox"/> | category | SPRING |
| <input checked="" type="checkbox"/> | level | MEDIUM |
| <input checked="" type="checkbox"/> | title | JavaBasics |

```
{
  "id": 11,
  "questionTitle": "What is Spring Boot?",
  "option1": "Framework",
  "option2": "Library",
  "option3": "Database",
  "option4": "Language",
  "correctAnswer": "Framework",
  "difficulty": "MEDIUM",
  "category": "SPRING"
}
```

2) /quiz/getquizbyid/{id}

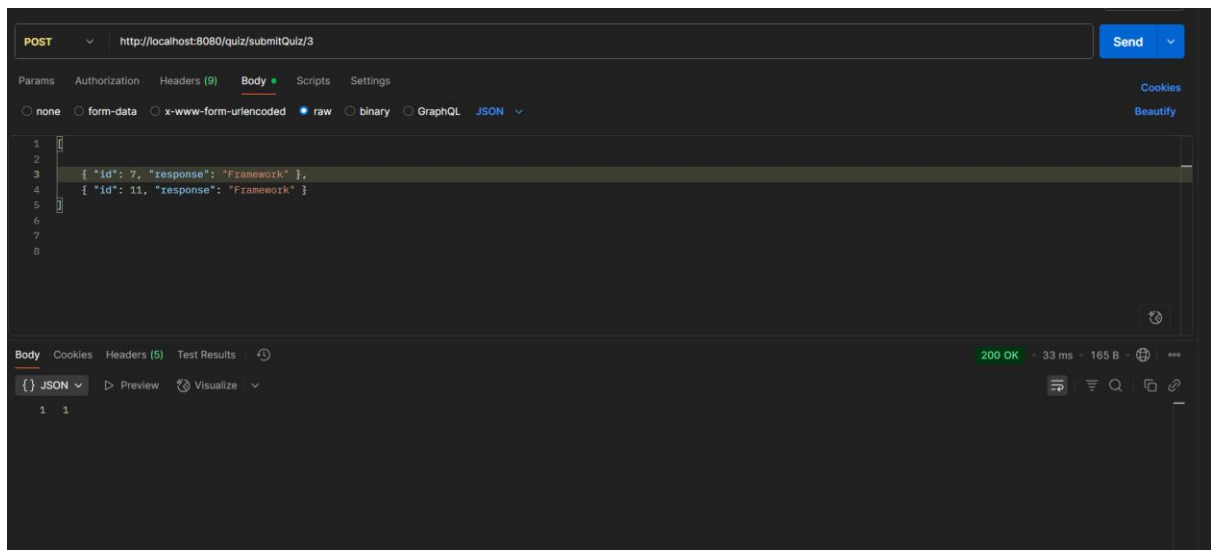

Getting quiz through /quiz/getquizbyid/id

The screenshot shows a REST client interface with a GET request to `http://localhost:8080/quiz/getquizbyid/1`. The request is successful, returning a 200 OK status. The response body is a JSON object representing a quiz.

```
{
  "id": 7,
  "questionTitle": "What is Spring Boot?",
  "option1": "Framework",
  "option2": "Library",
  "option3": "Database",
  "option4": "Language"
}
```

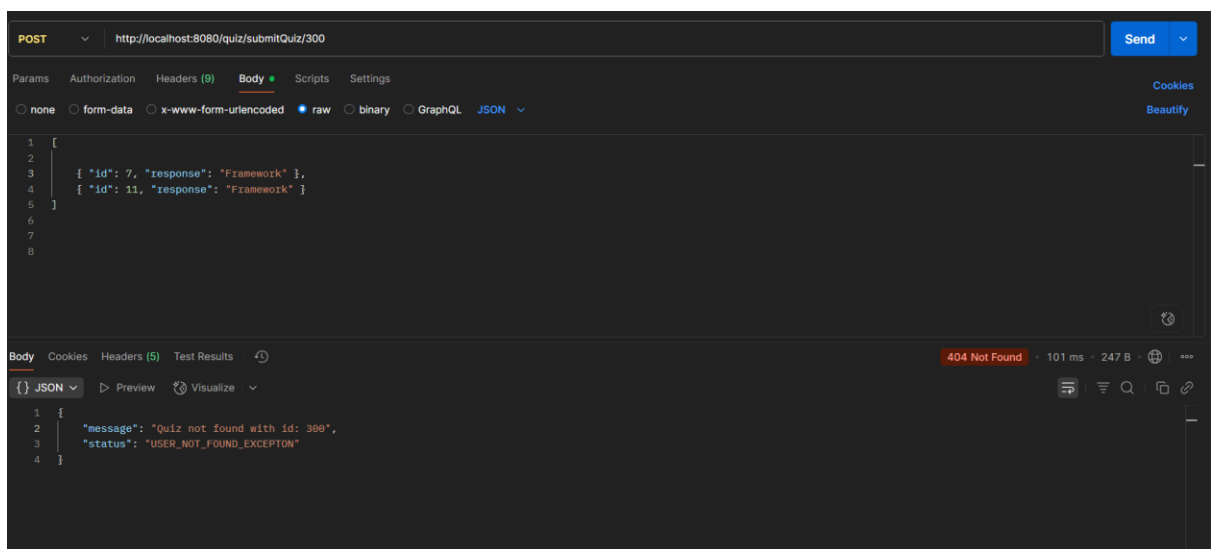

3) `/submitQuiz/{id}`

Submitting the quiz through `/submitQuiz/{id}` endpoint

MyCustomException:

Created the own custom exception
